

INFORMATION SECURITY AWARENESS ONSITE COURSE

**For all End Users
Non-technical**

www.focalpoint-sprl.be

Course Description

- The continued confidentiality, integrity and availability of an organisation's information and critical assets are of vital importance in the continuity of business operations and profitability for most enterprises and many have invested in security processes and technology in recognition of this.
- Technology and process, however, are not enough. Significant security risks remain through the accidental or deliberate action (or inaction) of employees; inadvertent disclosure through End User failure to follow security policy and processes has been widely acknowledged as a leading cause of data security breaches in recent years.

PRACTICAL EXERCISES

- ## **TARGET AUDIENCE**
- All the End Users non-technical

DURATION

- A 2day onsite high impact training for employees to raise Cyber awareness.

Course Topics

1. Security Policy
2. Password Management
3. Mobile Device Security
4. Social Engineering

5. Phishing Emails
6. Incident Reporting
7. Malware
9. Internet and Email Use

Course Objectives

The objective of the course is to equip End Users with:

- An understanding of the relevance of security within the context of business operations, governance, compliance and regulatory requirements. An awareness of the nature of threats faced by the enterprise.
- An understanding of security best practice and/or enterprise security policy.
- An understanding of how to use security best practice, processes and counter measures to mitigate threats to the enterprise and reduce risk of damage to its interests.
- A clear understanding of how to report security incidents.
